

FINANCIAL WELLBEING PROTOTYPE

Future You

Ask before you act.

A conversational financial simulator
showing how today's decision changes
tomorrow's cash flow, goals and financial
buffer.

THE CUSTOMER PROBLEM

Banking explains the past. Customers also need help testing the next decision.

Most banking tools answer:

“What happened to my money?”

Customers also need to know:

“What happens to my goals if I make this decision?”

WHAT WE BUILT

Ask a financial “what-if” question and receive a quantified answer based on your real plan.

1. Understand the decision

Bedrock extracts the amount, timing and intended goal from the question.

2. Calculate the impact

A deterministic Python engine projects cash flow, goal timing and financial risk.

3. Explain the trade-off

The customer sees what changes, what stays unchanged and why.

Every displayed financial figure is calculated by the rules engine. The language model never invents financial amounts.

A working interface connects the customer's position, goals and questions.

Safe actions by design.

Advice

Runs a scenario without changing the saved plan.

The customer can explore a decision and its trade-offs without writing any data.

Manage

Previews the exact proposed change and requires explicit confirmation.

Only a validated, confirmed proposal can update the customer's saved plan.

Never

Transfers money, makes payments or silently changes customer data.

Financial execution remains outside the agent's permitted actions.

IMMEDIATE DECISION

A \$2,000 purchase leaves Alex with a thinner, measurable cash buffer.

What happens if I buy a \$2,000 laptop?

BEFORE

Available balance

\$8,000

Monthly cash flow

\$1,350

LOW RISK

AFTER PURCHASE

Available balance

\$6,000

Existing goal timelines

Unchanged

MEDIUM RISK

Liquid buffer after purchase: 1.6 months of recorded expenses. Medium risk applies when the remaining balance covers less than two months of expenses.

BUSINESS VALUE

Future You turns digital banking from passive reporting into proactive support.

Customer value

Greater confidence before major financial decisions.

Clearer understanding of trade-offs.

Better alignment between spending and personal goals.

BNZ value

More meaningful digital engagement.

Responsible, personalised financial wellbeing support.

Help at the decision point—not after a problem appears.

Future You helps BNZ support the decision before it becomes a financial problem.

CALCULATION BOUNDARY

AI understands and explains. Python calculates.

Amazon Bedrock

Understands natural-language questions, extracts structured scenario inputs and explains calculated outcomes.

Deterministic financial engine

Calculates cash flow and goal timing, applies transparent risk rules and produces traceable financial figures.

AWS ARCHITECTURE AND VALIDATION

A working AWS-backed prototype.

Amazon Cognito issues the JWT; Lambda validates it before accessing DynamoDB. Backend and agent suites: **145 automated tests passing.**

FUTURE YOU

From financial hindsight to financial foresight.

Understand the impact of a decision before committing to it—using transparent calculations, personalised goals and responsible AI.

-
- 01 Cognito login, first-time onboarding and DynamoDB-backed customer profiles.
 - 02 Deterministic scenario calculations with Bedrock explanations.
 - 03 Live AWS backend with 145 automated tests passing.
-

Next step: pilot with consented customer data and measure decision confidence, goal adherence and digital engagement.
